Smartphones and tablets have now become an important part of everyday life in numerous ways. Sadly, all such benefits proportionally drain with the socket is not in your reach, the easiest method to get reconnected is with a power bank. Handy when traveling, hiking, camping, or even during a power failure.

A heavy duty power bank can charge your tablets or your cell phones with ease. Some power banks, however, can store enough juice to charge your gadgets several times. On the other hand, light weight power banks – though easy to carry and as the name suggest “light weight” – will charge your cell phones, but can only provide with enough juice to partially charge tablets. However, choosing the appropriate power bank as per the users’ needs is important, but don’t you worry, we’ve got all of this covered for you in this post here. Let’s start with number five.

1. iWalk Extreme Trio Power Bank

One of the coolest products by iWalk, the Trio power bank comes with 10,000 mAh of rechargeable Li-Polymer battery, meaning it can charge your smartphones thrice from 0% to 100%. Isn’t that cool?

One of the best power banks of 2016, it comes with a sleek design. At first glimpse you might just say it’s a big black box with no “wow” factor in it, but this coolest power bank comes with a handful of great features. Well, the power bank comes with two cables, one for Android devices, and another one for iOS devices. Each cable is approximately 8 cm long.

The power bank also has a button at the bottom, and two ports. The micro USB port is used for charging the power bank, while the USB 2.0 port can be used for attaching external wires for charging. The power bank accompanies a great feature, a cool Backlit LCD displays charging status which shows the percentage of the juice left inside the power source. That does sound like a cool feature, but it is very useful and handy too. Normally, in other power banks, there are a series of LED lights which gives users a rough estimate about the battery left, but having a display which shows the exact percentage of batter left is really useful.

With a 4.6 star out of 5 review at Amazon, this device is available in two colors, black and white. Priced at \$47.99 and \$44.99 on Amazon respectively.
